

Digital Imaging Workshops

Digital Imaging for Photographers

**Saturday Feb 27th
8:30 to 4:00**

**Burke
Auditorium
Saint Mary's
University
Robie & Inglis**

Presenters

Eric Boutilier-Brown

“From RAW to Ready; the Workflow of a Photographic Exhibition”

Eric Boutilier-Brown will present on the digital workflow from RAW images to final exhibition, using both Adobe Photoshop Lightroom and Adobe Photoshop CS4. Lifting the curtain aside, Eric will demonstrate the entire process, from initial RAW processing, to image finishing, exhibition design, and print-file preparation.

David Librach of Henrys School of Imaging

“Composition”

Now that you know all of the buttons and dials on your camera, you need to learn how to compose your pictures. This mini session will open your mind and imagination as you learn new techniques which will help stimulate your creative side and allow you to make your own photographic masterpieces.

Stephen Scott Patterson

Steve's presentation will include "Digital Polarization", using Photoshop's features, and the natural colors within the digital file, to create the exact effect of using a traditional polarizing filter. Some creative fun with "Digital Orton Montage" technique to create some impressionistic effects using a simple arrangement of layers and blending modes as well as image overlays to create more interesting and painterly effects. Some thoughts on compositional approaches and the creative process when approaching possible subjects to photograph.

Peter Steeper

Learn how easy camera calibration can be with Xrite's new ColorChecker Passport. It includes a plugin for Adobe Lightroom that includes automatic calibration, white balance and exposure verification.
